ABSTRACT

GOBETWEEN

Gobetween transportation means any roadway, railway, transit system, building, structure, appurtenance, or other real property used directly or indirectly in the transportation of persons or the transportation or storage of goods, substances, or vehicles. Gobetween transportation also includes services related to the transportation ofpersons or the transportation or storage of goods, substances, or vehicles. The bill excludes from the definition a bridge or other infrastructure directly associated with an international border crossing.

Existing System

No existing System.

Proposed System

Transport is important because it enables communication, trade and other forms of exchange between people, that in turn establishes civilizations. Transport plays an important part in economic growth and globalization, but most types cause air pollution and use large amounts of land. Transportation is the movement of goods and logistics is the inward and outward transportation of goods from the manufacture to the end user. Logistics and transportation deals with getting products and services from one location toanother. Logistics deals with the integration of storage, transportation, cataloguing,handling and packaging of goods. Transportation deals with the function of moving products from one location to another.

Logistics is obtaining, producing, and distributing materials and products in the right qualities and to an end user. Logistics includes the science of planning for managing and implementing procedures for the most efficient and effective storage and transportation of goods and services. Services and other information from the source pointto the consumer is sent through logistics channels to meet and fulfil customer needs.

The current system is done by manual work and more time consuming. It doesn’t have a support of any software. As such a pivotal function in day-to-day operations of many businesses, logistics is still noticeably slow to change. While retail and eCommerce face disruption after disruption and keep coming out on top, 50 percent of trucks travel empty on their return journey and warehouses are either overfilled or standing idle. Digitalization will allow warehousing and transportation operations to elevate customer experienece, deliver more value to partners, and consequently-create an effective

Objective

- Safety.
- Improving security.
- Improving the quality of air.
- Access of facilities.
- Integration between different modes of transport.
- Integration Transportation policy with other government policies.
